Seongsan Ilchulbong Peak rose from under the sea in a volcanic eruption over 100,000 years ago. Located on the eastern end of Jeju Island, there is a huge crater at the top of Seongsan Ilchulbong Peak. The crater is about 600m in diameter and 90m high. With the 99 sharp rocks surrounding the crater, it looks like a gigantic crown. While the southeast

and north sides are cliffs, the northwest side is a verdant grassy hill that is connected to the Seongsan Village. The ridge provides an ideal spot for walks and for horse riding as well. The Seongsan Ilchulbong Peak surrounded by bright yellow coloured canola flowers in the spring is truly a sight to behold.

Seongup Folk Village is a 500 year old village which has preserved its culture and lifestyle. The stonewalls encircling the straw roofed houses here are representation of traditional Jeju Island dwellings.
